

ISE 307: Engineering Economic Analysis (Term 253)

Homework 1, Version A, Due Wednesday, 24 June 2026, 11:59 PM in Gradescope

Name: _____ Student ID: _____

Section: _____ Date: _____

-
- Show all work in the spaces provided; You may add extra space as needed. Partial credit might be awarded for correct setup.
 - The submitted work must be your own; you may use generative AI only to check your work, i.e., after you have formulated and computed your own answers.
 - Round rates to 4 decimals in percent; monetary answers to 2 decimals.
-

Problem 1 (20 pts)

A research foundation will fund an inspection-robotics lab one of two ways: (A) 200,000 SAR paid now, or (B) 28,000 SAR at the end of each year for 12 years.

(a) (6 pts) Draw a labeled cash flow diagram for each option.

(b) (6 pts) At $i = 6\%$, find the present worth of Option B. Which option is worth more today?

- (c) (8 pts) Find the interest rate at which the two options are equivalent. State the approximate rate and interpret it for the lab.

Problem 2 (20 pts)

A phosphate plant borrows **60,000 SAR at 9% compounded annually** to install a conveyor. The lender offers **Plan 1**: five equal end-of-year payments; **Plan 2**: one lump payment at the end of year 5.

- (a) (4 pts) Draw one labeled cash flow diagram per plan.

- (b) (4 pts) Find the Plan 1 annual payment.

- (c) (4 pts) Find the Plan 2 single payment.

(d) (5 pts) Report the total paid and the total interest paid under each plan.

(e) (3 pts) The totals differ, yet the lender is indifferent between the plans. Explain why in 2–3 sentences.

Problem 3 (20 pts)

A plant keeps an automation reserve earning **7% compounded annually**. It deposits 10,000 SAR now ($n=0$) and 5,000 SAR at the end of year 2, withdraws 4,000 SAR at the end of year 4, and deposits 6,000 SAR at the end of year 5.

(a) (4 pts) Draw the complete cash flow diagram of the account.

(b) (8 pts) Find the account balance at the end of year 8!

- (c) (8 pts) The plant will empty this balance with **four equal withdrawals at the ends of years 9–12**. Find the withdrawal amount. (The year-8 balance sits one period before the first withdrawal.)

Problem 4 (25 pts)

A lithium refinery projects its first five years of revenue two ways ($i = 10\%$ throughout):

- **Projection G (geometric):** 120,000 SAR in year 1, growing 15% per year through year 5.
- **Projection L (linear):** 120,000 SAR in year 1, increasing by 18,000 SAR each year through year 5.

- (a) (6 pts) Draw a labeled cash flow diagram for each projection.

- (b) (8 pts) Find the present worth of Projection G with the geometric-gradient formula.

- (c) (7 pts) Find the present worth of Projection L as a uniform series plus a linear gradient, using the tables.

- (d) (4 pts) Which projection is worth more today, and by how much?

MCQs (15 pts)

Circle the best answer for each multiple-choice question, and mark each statement True or False.

1. (3 pts) Two haul-truck options carry *identical* permit fees and site-access charges, but differ in capital outlay, operating cost, and salvage value. According to the engineering-economy principles, which figures are relevant to the choice?
 - (A) All five figures, since each is a real cost.
 - (B) Only the figures that *differ* between the options.
 - (C) Only the permit fees and site-access charges.
 - (D) None — the cheaper truck is always best.
2. (3 pts) A refinery decides how many tonnes of concentrate to produce. It should keep increasing output as long as:
 - (A) total revenue is positive.
 - (B) the marginal revenue of one more tonne exceeds its marginal cost.
 - (C) the average cost per tonne is falling.
 - (D) the salvage value is positive.
3. (3 pts) A principal of 1,000 SAR is invested for 3 years at 8%. How much *more* does it earn under compound interest than under simple interest?
 - (A) Nothing — the totals are equal.
 - (B) About 20 SAR.
 - (C) About 240 SAR.
 - (D) Compound earns *less* than simple over 3 years.
4. (3 pts) **True / False:** With a positive interest rate, receiving 100 SAR today is economically equivalent to receiving 100 SAR one year from now.
5. (3 pts) **True / False:** “Earning power” and “purchasing power” are two distinct reasons money has a time value; inflation relates to purchasing power.

ISE 307: Engineering Economic Analysis (Formula Sheet)

This formula sheet is compiled with the help of GenAI. It has been reviewed and corrected by the instructor, but may still miss some course content or contain mistakes. If you find any issues, please report it so we can correct it for everyone's use. *Current version: v1.0, last updated: 2026-06-14.*

Single Payment

$$F = P(1+i)^N = P(F/P, i, N)$$

$$P = F(1+i)^{-N} = F(P/F, i, N)$$

$$N = \frac{\ln(F/P)}{\ln(1+i)}, \quad i = \left(\frac{F}{P}\right)^{1/N} - 1$$

$$N_{\text{double}} \approx 72/i (\%) \quad (\text{Rule of 72})$$

Equal-Payment (Uniform) Series

$$F = A \left[\frac{(1+i)^N - 1}{i} \right] = A(F/A, i, N)$$

$$A = F \left[\frac{i}{(1+i)^N - 1} \right] = F(A/F, i, N)$$

$$P = A \left[\frac{(1+i)^N - 1}{i(1+i)^N} \right] = A(P/A, i, N)$$

$$A = P \left[\frac{i(1+i)^N}{(1+i)^N - 1} \right] = P(A/P, i, N)$$

Linear Gradient Series

$$P = G \left[\frac{(1+i)^N - iN - 1}{i^2(1+i)^N} \right] = G(P/G, i, N)$$

$$A = G \left[\frac{(1+i)^N - iN - 1}{i[(1+i)^N - 1]} \right] = G(A/G, i, N)$$

Geometric Gradient Series

$$P = \begin{cases} A_1 \left[\frac{1 - (1+g)^N(1+i)^{-N}}{i - g} \right], & i \neq g \\ A_1 \left(\frac{N}{1+i} \right), & i = g \end{cases}$$

Useful Relationships

$$(P/F) = 1/(F/P) \quad \text{Reciprocals}$$

$$(A/F) = 1/(F/A)$$

$$(A/P) = 1/(P/A)$$

$$(A/P) = (A/F) + i \quad \text{Sinking/recovery}$$

$$(P/A) = (P/F) \cdot (F/A) \quad \text{Series link}$$

Nominal & Effective Rates

$$i = r/M$$

$$i_a = \left(1 + \frac{r}{M}\right)^M - 1$$

$$i = \left(1 + \frac{r}{M}\right)^C - 1$$

$$i_a = e^r - 1, \quad F = P e^{rN}$$

Inflation

$$i = i' + f + i'f$$

$$i' = \frac{1+i}{1+f} - 1 = \frac{i-f}{1+f}$$

$$A'_n = A_n(1+f)^{-n}$$

$$\bar{f} = \left[\prod_{k=1}^N (1+f_k) \right]^{1/N} - 1$$

Perpetuity (Capitalized Cost)

$$P = A/i$$

Worth & Equivalent-Cost Methods

$$PW(i) = \sum_{n=0}^N A_n(1+i)^{-n}$$

$$FW(i) = PW(i)(F/P, i, N)$$

$$AE(i) = PW(i)(A/P, i, N)$$

$$CE(i) = A/i$$

Capital Recovery with Return

$$CR(i) = (I - S)(A/P, i, N) + iS$$

$$AEC = CR + AE \text{ of operating costs}$$

Rate of Return (IRR)

Find i^* (the IRR) that satisfies:

$$PW(i^*) = \sum_{n=0}^N A_n(1+i^*)^{-n} = 0$$

Accept if $i^* \geq \text{MARR}$

Benefit-Cost & Profitability

$$BC(i) = \frac{B}{I+C'}, \quad PI(i) = \frac{B-C'}{I}$$

Depreciation

$$D_n = \frac{I-S}{N} \quad \text{Straight-line}$$

$$D_n = (I - S) \frac{U_n}{U_{\text{total}}} \quad \text{Units of prod.}$$

$$D_n = \alpha B_{n-1} = \alpha I(1 - \alpha)^{n-1} \quad \text{Declining bal.}$$

$$D_n = I \times r_n \quad \text{MACRS } (r_n \text{ table})$$

$$B_n = I - \sum_{k=1}^n D_k \quad \text{Book value}$$

Gains, Losses & Taxes

$$\text{gain} = S - B_n$$

$$\text{gains tax} = (S - B_n)t$$

$$\text{net salvage} = S - (S - B_n)t$$

$$TI = \text{Rev} - \text{Exp} - D_n$$

$$\text{income tax} = TI \times t$$

$$ATCF = (\text{Rev} - \text{Exp})(1 - t) + t D_n$$

Replacement Analysis

$$AEC(N) = CR(N) + AEC \text{ of O\&M}(N)$$

Break-Even & Sensitivity

$$Q^* = \frac{\text{Fixed cost}}{\text{Price} - \text{Variable cost}}$$

Standardized Normal (Risk)

$$z = \frac{x - \mu}{\sigma}, \quad \Phi(-z) = 1 - \Phi(z)$$

Interest Factor Tables

$i = 1\%$
